

NEXORA TECHNOLOGIES

Remote Work, Hybrid Work and Business Continuity Policy

Guidance for secure, productive work across home, office, customer and travel environments.

Document owner	People & Culture	Approved by	Chief Operating Officer
Effective date	October 1, 2026	Next review	October 1, 2027
Version	1.0	Applies to	All employees, contractors and interns

Document status: Approved for internal use

Policy code: NT-OPS-001

Effective: October 1, 2026

Review cycle: Annual or upon material change

This policy is a fictional example created for demonstration and training use. It is not legal advice and should be adapted to the actual company, jurisdictions and employment agreements.

1. Purpose and Eligibility

Nexora supports office, hybrid and remote work arrangements where the role, customer commitments, security requirements and team operating model allow.

- Eligibility and required office attendance are determined by role, team needs, customer obligations and applicable local requirements.
- Some work may require an approved secure site, office or customer location regardless of general remote-work eligibility.

2. Working Hours and Availability

- Employees should maintain the agreed working schedule and be reachable during core collaboration hours defined by their team.
- Use shared calendars and status indicators to communicate focus time, leave, meetings and planned unavailability.
- For distributed teams, clarify time zones and handoffs for work that crosses regions.
- Managers should avoid creating expectations for continuous after-hours availability except for defined on-call arrangements.

3. Workspace and Equipment

3.1 Workspace

- Maintain a workspace that supports confidentiality, reasonable focus and professional customer interaction.
- Position screens and printed materials to reduce unauthorized viewing by visitors or passersby.

3.2 Equipment

- Use company-issued devices for company work unless an approved bring-your-own-device arrangement exists.
- Keep equipment physically secure, especially in shared housing, co-working spaces, airports and hotels.
- Do not lend company devices, security tokens or access badges to another person.

4. Information Protection While Remote

- Use approved VPN, identity controls and collaboration platforms when required by the system or data classification.
- Do not print Restricted information at home unless there is a legitimate business need and secure disposal is available.
- Use headphones when discussing customer, employee or other confidential topics in shared spaces.
- Store files in approved company repositories rather than personal cloud drives or removable media.
- Report lost equipment, suspicious access or accidental disclosure through the security incident process.

5. Meetings and Collaboration

- Use company-approved video conferencing and chat systems for business communications.
- Check the intended audience before sharing screens or documents that may contain sensitive content.
- Record meetings only when appropriate, with required notice and access controls.
- Document decisions, owners and deadlines in the team system of record when material work is agreed verbally.

6. Travel and Public Spaces

- Avoid discussing confidential information in public areas where others can overhear.
- Do not use unsecured public computers for company work.
- Protect devices during travel and do not leave equipment unattended in vehicles or public locations.
- Follow customer site rules and regional legal requirements when working from another location.

7. Business Continuity

Teams must maintain practical continuity plans for events such as regional outages, severe weather, building closures, cyber incidents or loss of a key service.

- Critical services should have documented owners, recovery steps, dependencies and communication channels.
- Important work should not depend on a single individual when reasonable backup coverage can be arranged.
- Teams may use alternate work locations, cloud services or temporary operating procedures during disruptions, subject to security approval.
- After a material disruption, teams should record lessons learned and update recovery procedures.

8. Health, Safety and Wellbeing

- Maintain a safe and ergonomically reasonable work setup and follow local workplace safety guidance.
- Take appropriate breaks and use leave or support resources when needed.
- Employees should tell their manager or People & Culture when a workplace arrangement creates a practical barrier to performing the role safely or sustainably.
- Emergency incidents should be reported through local emergency services first when there is immediate risk to life or safety.

9. Performance and Accountability

- Remote work is evaluated on outcomes, delivery quality, collaboration, reliability and adherence to role expectations.

- Managers should set clear goals, review progress regularly and address performance issues through the normal people-management process.
- Employees remain responsible for deadlines, customer commitments, documentation and escalation of blockers regardless of work location.

10. Exceptions and Review

- Temporary exceptions to location or schedule requirements require manager approval and may require People & Culture, Security or Legal review.
- This policy may be updated when business needs, technology, security risks or applicable requirements change.

Practical rule: When working remotely creates a conflict between convenience and security, customer commitments or a mandatory control, follow the higher-priority requirement and ask your manager or the responsible function for guidance.
